(54) Title: METHOD OF PAYING TOLL FOR MOBILE TELEPHONES

(57) Abstract: There is described a communication apparatus (10) for communicating via one or more services provided by a service provider (80). The apparatus (10) is preferably a mobile telephone. Moreover, the apparatus (10) includes a memory device (30) susceptible to receive one or more data carriers (20) distributed by the provider (80) in return for payment. The device (30) is operable on presentation of the one or more data carriers (20) thereto to directly access data (60, 65, 300) on the one or more data carriers (20). Furthermore, the apparatus (10) is further arranged to be capable of communicating the data (60) to the provider (80) for the provider (80) to check the data (60) for updating a toll credit for the apparatus (10) according to information conveyed in the data (60) when the data (60) is found to be valid. Use of the data carrier (20) enables advertising and addresses problems encountered when, for example, using contemporary scratch cards for toll crediting purposes.
